

Dear Hiring Team at BC Transit,

I am writing to express my interest for the IT Data Analyst position at your company. An excellent candidate for this position would have a strong understanding of Python, SQL and R. In addition, the right candidate should have a strong desire to solve challenging problems. I believe my resume will show a proven history of utilizing these various skills through my professional and educational experiences.

During my time at the University of Toronto, I studied mathematics and computer science, as a result, I am very familiar with data processing and analysis using tools such as Python and R on a daily basis. As well, in many of our projects we built projects using SQL based databases as our primary data storage, which makes me well acquainted with these technologies.

Furthermore, my role as a Software co-op student at the Ontario Ministry of Health has significantly enhanced my problem-solving and analytical reporting abilities. We worked tirelessly to build and support systems that would be used by thousands of hospital organizations across Ontario, and this experience has provided me invaluable hands-on experience in a real-world setting, further refining my skills.

BC Transit is an outstanding company with a proven track record of creating sustainable and safe solutions for transportation in BC. Your focus on safety and affordability are ones that I cherish as a former student in BC. I believe that as a Data Analyst at BC Transit, I could bring a diverse set of skills and in return, I can further develop my knowledge and experience while working with you and your team. I am very interested in discussing this opportunity further. Please contact me at your earliest convenience so I can learn more about the position. I've attached a copy of my resume for your review, I look forward to hearing from you soon.

Thank you for your time and consideration,

Warm regards,
Brandon Liang
